

# Homework 18

---

1. Take a simple contract such as  
<https://gist.github.com/extropyCoder/ee13757c027613cfefbafa4275e5de5c6>  
(<https://gist.github.com/extropyCoder/ee13757c027613cfefbafa4275e5de5c6>)
  - Compile this in Remix, deploy it to the Javascript VM, send a transaction to call the store function.
  - Use the debug button in the console to run the transaction through the debugger and look at the opcodes and data are added to the stack.
2. Create a second contract to interact with the storage contract  
Using the external call example code given in the notes try to call the Storage contract from the second contract.
